

FEATURED ALUM-A-LIFT BALL TRANSFER SERVER INSTALLATION LIFT

PROJECT 27377

MODEL A800CS-96

FEATURING Powered Retractable Ball Transfer Deck with ESD Guards, ESD Drag Chain, & Low Profile Legs

HANDLING 600 lb [272 kg] Servers

DETAILS Data centers are often being expanded and upgraded. It is important that the servers are easily loaded and unloaded from the racks. Low profile legs allow this lift to approach racks without interference and a powered ball bearing transfer platform keeps the servers in place while the lift is moving from place to place. This lift is more ergonomic and has over twice the capacity of manual crank lift it was replacing.
