

FEATURED ALUM-A-LIFT
 COMPACT TOWABLE LIFT WITH HOOKS FOR TEST WEIGHTS

PROJECT
26669

MODEL A800CS-72

FEATURING Lifting Hooks, Foldable Boom, Tow Handle, Pneumatic Tow Wheels.

HANDLING 200 lb [90 kg] Calibration Weights

DETAILS Calibration weights are used to check the accuracy of weighing systems as part of routine maintenance. This lift is designed to be easily tipped rearward in order to be towed behind a golf cart for transport between buildings across a military site. The pneumatic tires reduce vibration over rough ground and protect the lift's internal components. The folding boom and low profile handles allow the lift a small overall footprint within crowded aircraft hangars.
