

FEATURED ALUM-A-LIFT
 ERGONOMIC MINI FORK LIFT FOR HANDLING PALLETS

PROJECT
30091

MODEL B350CS-72

FEATURING Lightweight Wide Straddle Base, Adjustable Aluminum Forks, Variable Speed Control, Quick Exchange Batteries

HANDLING 250 lb [113 kg] Loaded Pallets

DETAILS Moving pallets from place to place often requires a fork lift or a pallet jack. This lift is capable of placing pallets higher than a pallet jack without the need for an operator to be skilled with a forklift. The wide straddle base and large casters allow an operator to easily transport the lift and its load to the unload point. Quick exchange batteries allow the lift to operate continuously without any downtime for charging across three shifts. The adjustable forks fit a wide variety of pallets.
