

FEATURED ALUM-A-LIFT
PORTABLE LIFT WITH ROTATING ROLL CLAMP

PROJECT
32156

MODEL B350CS-72

FEATURING Powered Clamp, Manual Wrist, Quick Exchange Battery System

HANDLING 280 lb [127 kg] Rolls

DETAILS Food packaging often requires lifting and manipulating rolls from a pallet to an overhead load position. The mobile nature of this lift system provides the capability to load multiple splicing machines with one lift. The high frequency of operation eliminates any opportunity to charge the on-board battery; therefore, our quick exchange battery system was included to allow one battery to be charged while the other battery is being depleted. Changeover between batteries takes less than thirty seconds.
