

FEATURED ALUM-A-LIFT  
TOTE HANDLING LIFT WITH ROTATING FORK SET AND FUNNEL

PROJECT  
**35155**

**MODEL** B350CS-72

**FEATURING** Fork Set with Integrated Funnel, Manual 360° Rotation Module, Quick Exchange Battery System

**HANDLING** 75 lb [34 kg] Totes

**DETAILS** Transporting materials into elevated hoppers can pose safety and ergonomic challenges. This tote handling lift effectively addresses these issues by incorporating ergonomic features throughout its design, ensuring it is both safe and user-friendly for all operators. Furthermore, the engineering team at Alum-a-Lift collaborated closely with the customer to create a turnkey system that requires no modifications to existing containers, current processes, and equipment.

A special fork set was designed to securely grip the lip of the totes, facilitating safe handling of the tote and its contents. The forks also include an integrated funnel to guide the contents during the dumping process. To minimize downtime due to charging, the lift is equipped with quick-exchange batteries and an offline charger.
