

FEATURED ALUM-A-LIFT
 POWERED TILTING PLATFORM LIFT FOR COMPUTER CHASSIS

PROJECT
35630

MODEL A800CS-81

FEATURING Powered Tilting Platform, Manual Clamp Support, European Conformity Kit; CE (Incl 220VAC Charger)

HANDLING 300 lb [136 kg] Trays/Chassis

DETAILS This Alum-a-Lift has been skillfully designed to simplify the assembly of chassis enclosures that protect and house a computer's internal parts, such as the motherboard, power supply, and storage drives. Assembling a chassis can be quite intricate, and doing it correctly is essential for the system to function safely and efficiently.

The featured powered tilting platform can rotate 90°, making it ideal for vertical removals and component installations. It comes with a manual clamp support featuring two settings: one for the tray height (applicable for both single and double server modules) and another for the chassis height, ensuring that components remain secure during movement.
