

FEATURED ALUM-A-LIFT
SIDE-TO-SIDE ROLLER DECK LIFT FOR SERVER HANDLING

PROJECT
35817

MODEL A800CSLR-84

FEATURING Quick-Exchange Battery System, Side-to-Side Roller Deck, Flip-Up End Stops, Fixed Leveling Adjustment

HANDLING 500 lb [227 kg] Servers

DETAILS Installing servers into racks is a critical data center process that requires safety, precision, and equipment compatibility. Our side-to-side roller deck lift is designed for heavy, sensitive servers containing PG25—a low-toxicity, water-soluble heat transfer fluid that cools servers while powered on. The low-friction platform and safety features, such as flip-up stops, prevent slippage during transport, ensuring safe and efficient installation while minimizing risks to personnel and IT equipment. The Alum-a-Lift also features a quick-exchange battery system for fast battery replacement, reducing downtime.
