

# FEATURED ALUM-A-LIFT HIGH-CAPACITY CLAMP LIFT WITH POWERED ROTATION

## PROJECT 34726

**MODEL** C3500CSLRPD-72

**FEATURING** Powered Rotation, Powered Clamp, Powered Drive Wheel, Fork Pockets

**HANDLING** 1000 lb [453 kg] Billets

**DETAILS** Built for robust performance and efficiency, our high-capacity lifting solution streamlines the transport of heavy composite materials. Designed to handle 1,000 lb billets, the system can rotate loads for optimal reach and clearance at a Bullard machine. Dual clamp force settings ensure proper handling of both lighter and heavier billets.

Forklift pockets are integrated to allow easy transport of the lift throughout the facility, while the compact design ensures excellent maneuverability and stability in all required areas. Additional features include a lock-out/tag-out (LOTO) safety mechanism, ingress protection against carbon dust, and clamp pad spacers for enhanced versatility.
